

Venetian blind system C80

SunFas venetian blinds are modern, elegant window and door covers, installed outside of the buildings. They are an excellent barrier against excessive sunlight. They are suitable for the adjustment of light and heat entering the room. In addition to practical values, venetian blinds can be an aesthetic decoration of the building. Feature simple and modern design, dedicated to facilities with a large surface area of windows or glass facades.

advantages of our solutions

- _ complete absence of visible mounting screws on both guide channels and the cove box
- _ easy and quick installation of different variants of guide channels
- _ smooth control of the blinds (opening and closing) in the range of 90° and 180°, ensuring comfortable and individual adjustment of the degree of light penetration into the interior; changing the angle of the slats allow adjustment of the light and heat entering to the room

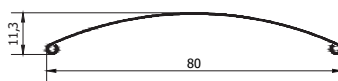

offer

- _ two types of blinds are available: concealed and adapted versions
- _ the under plaster version – 2 types of guide channel / concealed Z34 / embedded in the insulation layer / and exposed guide channel N91 mounted directly to the joinery, with the option of width extension
- _ adapting blinds – 3 types of guide channel: cord, full guide channel N91, and a guide channel on spacers D22

technical data

- _ slats made of high-quality aluminium

C80

structure dimensions

Type of slat	min. width [mm]	max. width [mm]	max. height [mm]
